

KEEP YOUR HANDS OFF IT

RackIt™

HAND SAFETY TOOL

The RackIt™ hand safety tool helps safely facilitate pipe rack-back on drilling rig operations.

It keeps a worker's hands off the pipe during rack-back maneuvering while still keeping the body close enough to maintain proper control of the stand of drill pipe after its connection is broken from the rest of the drillstring.

Less Impact

The RackIt's barbell-style handles provide side impact protection for the user's hands.

Guide and Glide

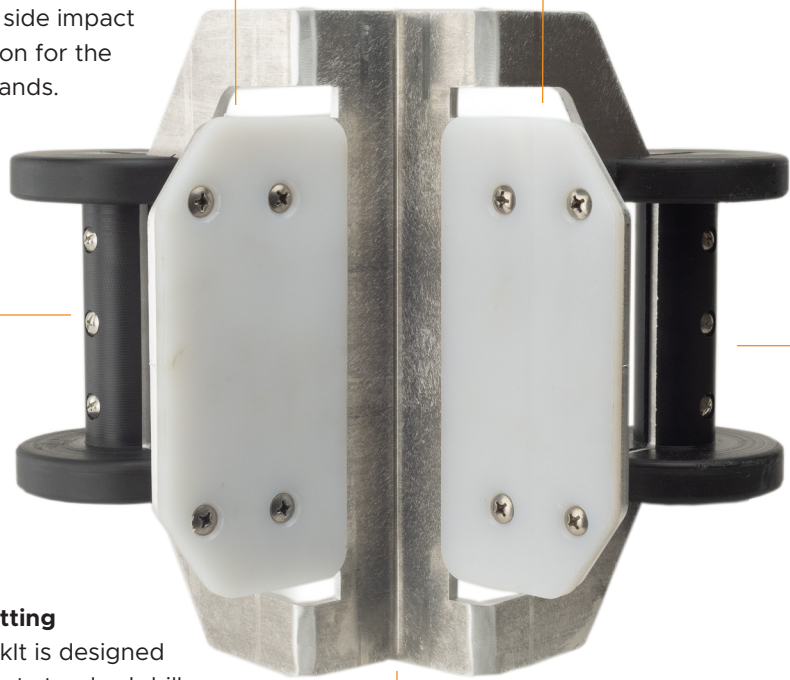

Heavy-duty high-density plastic inserts allow the pipe to glide freely.

Quite Fitting

The RackIt is designed to fit most standard drill pipe ranging in size from 4-8" in diameter.

More Control

The tool's twin handle design offers a stable grip for maximum control of the tubular.
